Economic Nexus and State Tax Obligation

2024 - 2026 H1

About Executive Snapshot

Nexus Exposure by State measures how each state's rolling 12-month sales — revenue and transaction count where applicable — compare against that state's annual threshold and filing type logic. This reflects individual state performance at any given point in time and is intended to show where JMM is accumulating economic presence, regardless of when that presence formally triggers an obligation.

Tax Obligation by State takes this one step further: rather than measuring against annual thresholds universally, it applies each state's specific measurement period — Prior Calendar Year, Current or Prior Calendar Year, Rolling 12 Months, or Connecticut's fiscal year — to the appropriate sales window. States highlighted here reflect confirmed or imminent tax collection and remittance obligations under each jurisdiction's actual statutory framework.

Gray states indicate no JMM sales recorded in the selected period for the selected store.

DATA SOURCE

This dashboard blends JMM's Avalara sales tax exports from January through June 2026 with synthetically generated data covering 2024 and 2025. Synthetic data was introduced to enable full measurement-period calculations — Prior Calendar Year and rolling window evaluations require historical depth that a mid-year export alone cannot provide. All scoring and obligation logic is applied consistently across both real and synthetic figures. This dashboard is intended for internal planning purposes and should not be used as a substitute for a formal nexus study.

The following jurisdictions are excluded from this dashboard:

- Alaska, Delaware, Montana, New Hampshire, and Oregon: no state sales tax; economic nexus does not apply
- Guam: no codified economic nexus threshold for remote sellers

Nexus Score Analysis

2024 - 2026 H1

How is the Nexus Score calculated?

The Nexus Score represents how close JMM is to triggering economic nexus in a given state, expressed as a ratio of actual activity to the state's annual and monthly thresholds and interpreted as follows:

- For revenue-only states, the score equals total monthly revenue divided by the monthly revenue threshold.
- For OR states, the score is the higher of the revenue ratio or the transaction count ratio, nexus is triggered if either condition is met.
- For AND states (CT, VT, NY), the score is the lower of the two ratios, both conditions must be met simultaneously for nexus to apply.
- Scoring and corresponding color mapping can be read as follows:

- Clear (Below .5)
- Approaching (Between .5 and .75)
- Warning (Between .75 and 1.0)
- Exceeded (1.0 and above)

State	Score	Revenue
New York	11.35	\$11,348,332
Texas	6.72	\$7,872,078
Florida	20.61	\$4,682,181
New Jersey	7.20	\$1,537,591
Illinois	5.35	\$1,254,154
Colorado	4.22	\$927,959
Washington	3.58	\$883,998
Arizona	3.13	\$645,165

Nexus Distribution

Nexus Timeline

2024 - 2026 H1

Filing obligations over time for each state-store combination, evaluated according to each state's threshold logic, measurement period and mandated registration window.

Threshold Exceeded - This state has surpassed its annual revenue or transaction threshold at this point in time, establishing economic nexus.

Suggested Remittance - Remittance is recommended even without a confirmed tax obligation, under two conditions:

1. For states with **rolling measurement windows**, the store may briefly dip below threshold between exceedance periods. Staying registered avoids fines associated with overlooked under-filing during re-entry.
- 2.The store is within **95% of this state's threshold**. A single strong month could trigger nexus in the same period, leaving no time to register.

Tax Owed - This state is in its mandatory collection and remittance period. Active registration and filing is legally required.

Illustrative Examples

Florida · Prior Calendar Year · \$100K threshold: Hill Street crossed Florida's \$100K threshold during 2024; red activates from the month of exceedance, and purple appears simultaneously as the 95% proximity condition is met. However, Florida measures the *prior* calendar year, meaning mandatory collection does not begin until **January 2025**. Magenta activates then, and purple is suppressed until that same point; there is no practical reason to suggest collection before the obligation window opens.

Illinois · Rolling 12-Month · \$200K threshold: Illinois uses a rolling 12-month window, so nexus is evaluated continuously rather than once per year. Once Hill Street's trailing revenue crossed \$200K, red appeared; magenta followed one month later per the 30-day registration window. If product returns in a given month briefly pulled the rolling total below \$200K before revenue recovered, purple bridges that gap — flagging that deregistering for one or two months, only to re-trigger nexus shortly after, would create unnecessary compliance exposure.

6 Month Threshold Status

Threshold Detail by State

'Revenue Only' | 2024 - 2026 H1

This page breaks down economic nexus exposure for states that trigger nexus based solely on total sales revenue. Transaction volume is not considered in these states — a single large order carries the same weight as many small ones. States are grouped by their measurement period:

Prior Calendar Year (AL, FL, MA, OH, PA) evaluates the full January–December revenue of the preceding year. Nexus is established and collection begins January 1 of the following year if that prior year's revenue exceeded the threshold. The "Prior Year Exceeded" column confirms whether the obligation window is currently active.

Current or Prior Calendar Year (CA) triggers nexus if either the current calendar year-to-date revenue or the prior full calendar year revenue crosses the threshold — whichever comes first.

Rolling 12 Months (IL, MN, MS, TN, TX) evaluates a continuous trailing 12-month window rather than a fixed calendar year. Nexus can trigger and lapse within the same calendar year depending on revenue trajectory. The "Months Since Last Exceeded" column flags states where the rolling window has recently fallen below threshold.

*** Rows disappear when the destination state is the same as the origin state; physical nexus is present, economic nexus does not apply.*

Threshold Detail by State

'AND'/'OR' | 2024 - 2026 H1

This page covers states that apply both a revenue threshold and a transaction count threshold, distinguished by whether nexus requires one or both conditions to be met.

OR states trigger nexus if either the revenue threshold or the transaction count threshold is exceeded independently. The majority of states with dual thresholds follow OR logic: a high-volume, low-dollar store and a high-dollar, low-volume store are both at risk.

AND states (CT, NY, VT) require both thresholds to be crossed simultaneously. Exceeding revenue alone is not sufficient, nor is exceeding transaction count alone. These states are grouped separately and evaluated against their distinct measurement periods:

Rolling 4 Quarters: NY — New York uses a rolling four-quarter window with a \$500,000 revenue and 100-transaction threshold, evaluated on a per-quarter basis (\$125,000 and 25 transactions per quarter).

Prior Calendar Year (Sep 30): CT — Connecticut's fiscal year runs October 1 through September 30. Both prior fiscal year totals and current fiscal year-to-date figures are shown to track progression toward the \$100,000 and 200-transaction thresholds.

Rolling 12 Months: VT — Vermont applies AND logic over a continuous trailing 12-month window. Both revenue and transaction count must simultaneously exceed their respective thresholds within that window for nexus to be established.

*** Rows disappear when the destination state is the same as the origin state; physical nexus is present, economic nexus does not apply.*

Priority Score & Risk Index

2024 -2026 H1

How is the Priority Score calculated?

The Priority Score ranks states by combined nexus exposure and revenue, highlighting where JMM faces the greatest compliance pressure heading into H2. It is an equal-weighted combination of two components:

Nexus Exposure (50%) — how much of the cumulative threshold has been fulfilled. Each state's specific filing logic applies (revenue only, OR, or AND). Capped at 1.0; states already past threshold are treated as equally exposed, letting revenue weight differentiate among them.

Revenue Weight (50%) — the state's cumulative revenue as a proportion of the store's highest-revenue state over the same window, normalizing risk relative to where sales are concentrated.

A score of 1.0 means a state has both exceeded its 6-month threshold and is the store's top revenue market.

Score Velocity reflects momentum rather than cumulative standing. It compares average monthly Priority Score over the most recent two months against the prior two. ↑ = accelerating, ↓ = easing, → = stable. The underlying monthly score evaluates each month in isolation; nexus exposure is measured against that month's prorated threshold share, and revenue is normalized to the store's top state for that month, preserving sensitivity to recent shifts that the 6-month figure would otherwise smooth over.
